CYBERINSIGHTS | DEFENSIVE FIELD CHECKLIST

Patch priority decision record

Reviewed November 24, 2026 | Harpreet Singh, CISSP, CCSP

1. Confirm product, runtime version and advisory revision.

2. Record exploitation evidence with its source and time.

3. Review ingress, internal paths and privileges.

4. Name action owner, dependency and temporary controls.

5. Agree supported update and rollback acceptance criteria.

6. Verify every running instance and representative workflow.

7. Separate compromise assessment from patch status.

8. Record evidence gaps, exception expiry and next review.

Owner: _____ Review date: _____

Editorial checklist; no customer system or detection rule was tested. Preserve evidence under your incident process. This is not a compliance certification.
